

[Claim(s)]

[Claim 1] An aqueous emulsion composition which consists of an aqueous emulsion (A) and amino group water content nature resin (B) which make a dispersoid a polymer which has a kind or two sorts or more of unsaturation monomeric units chosen from an ethylenic unsaturated monomer and a diene system monomer, and make a vinyl alcohol system polymer a dispersing agent.

[Claim 2] The aqueous emulsion composition according to claim 1 whose vinyl alcohol system polymer is a vinyl alcohol system polymer beyond saponification degree 95 mol %.

[Claim 3] a vinyl alcohol system polymer -- intramolecular -- an ethylene unit -- 1-15-mol % -- the aqueous emulsion composition according to claim 1 or 2 which it contains and is a vinyl alcohol system polymer beyond saponification degree 95 mol %.
